ABSTRACT

The series of "Resource Inventories" is designed to encourage wider use of available information and services in the field of special education technology. A resource inventory is provided for each of 46 states of the United States. Each inventory includes directory information on public and private agencies and organizations that offer technology-related services. Resource information is organized into seven service areas: state agencies, special education resources, rehabilitation/vocational resources, organizations/affiliates, community-based resources, medical/hospital resources, and special projects/centers. A system of codes identifies the type of service provided (such as direct service, assessment, information, training, product evaluation, assistive devices, or technical assistance); the audience served (i.e., parents, educators, or rehabilitation personnel); and the areas of disability/handicap served. Following the state inventories are three special listings of rehabilitation engineering centers, national special education alliances, and national information service providers. (JDD)

Resource Inventory Cover Sheet

As a national resource with the goal of increased use of information about technology, the Center for Special Education Technology routinely monitors the growing number of resources available to technology users. Our series of Resource Inventories is designed to encourage wider use of available information and services. Inventories are organized by state and by topic. Each inventory includes information about public and private agencies and organizations that offer technology-related services. Resource information is organized in the seven service areas listed below. A system of codes identifies the type of service provided, the audience served, and the areas of disability/handicap for each resource. We hope that organizing the information in this way will lead to more efficient use of these valuable technology resources.

State Agencies

There are two state level agencies that have specific responsibilities for the development and delivery of services to handicapped children and adults. These state agencies implement state and federal legislation and develop policies and programs. The state office or division of special education has legal responsibility for the administration and supervision of special education programs in the schools. The state vocational rehabilitation agency provides a range of services needed to prepare people with disabilities for work and oversees the federal-state rehabilitation services. In many states these agencies are active in promoting the use of technology and can assist in locating resources and services within the state.

Special Education Resources

There are a growing number of resources that provide information and services about the use of technology in special education. Some are state funded projects; others are supported by universities, school districts, or other educational agencies. Many states have a network of intermediate units that provide support to school districts and their personnel. The available special education services may include databases and other information products, training, technical assistance, and in some cases, direct services to children. Resources providing assessment, loan, and training services related to the assistive uses of technology are on the increase. Most of the resources listed in this category provide services within the state.

Rehabilitation/Vocational Resources

There is an extensive nationwide network of federally funded rehabilitation engineering centers and research and development facilities. Many provide information of interest to special educators; others design and develop special aids and equipment for disabled individuals. State rehabilitation agencies often support special projects and service centers that apply technology in the workplace and for independent living. Vocational training facilities, operated by public and private agencies, may provide similar services.

Organizations/Affiliates

Professional, advocacy, consumer, and voluntary organizations generally focus on a particular disability or group of service providers. An increasing number of these organizations are involved in technology-related activities. The information and services provided by such groups will vary widely from print materials to direct services for individuals. Many national organizations such as the Association for Retarded Citizens (ARC) and United Cerebral Palsy (UCPA) have a network of affiliates across the country that are active in the local community.

Community-based Resources

Local, community-based groups are often the most valuable and accessible source of information and services. The widespread interest in technology has resulted in a number of community-based resources that can be very helpful to educators, parents, and individuals with disabilities. Computer user groups are active in many communities. Local libraries and schools are often involved in technology-related services. Large and small businesses are another source of support in a community. The Apple Special Education Alliance is one example of business support to community-based groups interested in technology use. Our inventories provide some information about community-based resources. We expect there are many more worth investigating.

Medical/Hospital Resources

The application of technology in medical settings is widespread. There is an increasing use of technology-related devices and systems as rehabilitative aids in areas such as communication and mobility. Direct service agencies such as hospitals, medical facilities, and clinics often provide assessment, rehabilitative, and assistive device support for individuals. These facilities may diagnose individual needs and design and adapt special aids and equipment for use in educational and living environments. Some resources work in conjunction with educational facilities to provide the support needed for handicapped children.

Special Projects/Centers

Federally-funded projects, information clearinghouses, and private sector projects are another source of information and services. These resources can be categorized as providing general information about special education and/or technology (i.e., ERIC Clearinghouses) or specialized information about special education technology (i.e., the Center for Special Education Technology and the IBM National Support Center for Persons with Disabilities). A range of services may be available including information and referral, technical assistance, research and development, and training. Most of the projects have a national or regional service area and are listed in our topical inventories. They have also been included on the inventories for the state in which they reside.

Resource Inventory: North Carolina

The Center's Resource Inventory series provides listings of information and service resources in special education technology. The inventories are organized by state and by topic. This information is intended to help technology users locate needed services. Current listings are not all inclusive. Readers are urged to contribute by suggesting other technology resources to be added to the Center inventories.

Resource Inventory: Rehabilitation Engineering Centers

The Center's Resource Inventory series provides listings of information and service resources in special education technology. The inventories are organized by state and by topic. This information is intended to help technology users locate needed services. Current listings are not all inclusive. Readers are urged to contribute by suggesting other technology resources to be added to the Center inventories.

The Rehabilitation Centers are funded by the National Institute on Disability and Rehabilitation Research, U.S. Department of Education. Each center has its own area of specialization.
